

Assignment

Personal Portfolio Website

Version 1.0

Submission Details:

- You have to submit the code URL of the public Github Repository.

Problem Details:

- The frontend application needs to be implemented using HTML, CSS, and JavaScript. For data handling use local storage.
- You have to design the UI for all the web pages as well.
- On the homepage show a navbar on the header part and other pieces of information on the body part
- Home Page will have the following Sections:
 - About
 - Skills
 - Projects
 - Training and Experience (if you have any)
 - Contact me
 - Footer
- On the home page if we click on the navbar's options it must redirect us to the respective section.
- In the About section add your details and social media links like- GitHub, LinkedIn, Gmail, etc.
- In the Skills section add the programming languages that you know.
- In the Projects section add the project images and description and also add a view more button and when we will click on that button it will redirect us to the single page of that particular project where it has all the information in detail.
- In the contact us section add a form and a submit button with validation.
- Design the project with Html, CSS, Bootstrap, and add functionalities like form validation and animations using JavaScript.
- For reference visit this link - <https://marketifythemes.net/html/cavoni/index.html>

NOTE:

Don't copy the source code or the design from the given link try to create your own design and features
